Mohan Sai Pujari

SOFTWARE DEVELOPMENT ENGINEER

+91 9703183308 mohansai.pujari@gmail.com LinkedIn GitHub Leetcode

Summary

Backend Engineer with **4+ years of experience** designing and building scalable, distributed systems using Java, Go, Scala, and Python. Experienced in microservices, cloud-native applications, real-time event-driven systems, ETL pipelines, inventory platforms, and high-volume data processing. Strong expertise in system design, backend architecture, and production-scale applications focused on scalability, reliability, maintainability, and performance.

Professional Experience

Recro (BigBasket) **November 2025 - July 2026**

Senior Software Engineer (Backend) *Bangalore, India*

- Engineered backend services for BigBasket's high-scale **Checkout Platform** using **Go, Java, Kafka, React.js, and Aerospike**, implementing checkout and coupon validations, fulfillment routing, and event-driven services while developing AI-assisted homepage banners and widgets using Cursor to deliver seamless user experiences
- Developed a centralized **Python and Frappe Helpdesk platform** with SLA tracking, workflow automation, & cross-system synchronization, supporting **100K tickets/day** while cutting third-party platform costs by **60%**
- Designed and developed scalable **Go-based microservices** powering **Warehouse Management System (WMS)** workflows, enabling inventory movement, rack-level stock tracking, automated replenishment, and order orchestration across Dark Stores, Distribution Centers, warehouses, and distributed fulfillment networks.

Reliance JIO Platforms Ltd. **July 2022 - November 2025**

Software Development Engineer II (Backend) *Bangalore, India*

- Engineered scalable event-driven services using **Java, Scala, Kafka, Cassandra, Redis, Spring Boot, and Elasticsearch**, processing millions of IoT events daily for dashboards, asset management, and notifications.
- Optimized backend workflows, data ingestion, and reporting pipelines by rearchitecting queries and distributed processing, reducing query latency from **70ms to 10ms** and report generation time from **2hrs to 10mins**.
- Owned and architected a **Scala-based analytics and reporting engine** that consumed IoT data from **Cassandra**, aggregated historical data from **Elasticsearch**, generated scheduled reports through distributed cron jobs, and stored processed results back into Elasticsearch while exporting large reports to **AWS S3**.

Skills

- **Programming Languages:** Java, Scala, Python, Go, SQL
- **Frameworks:** Spring Boot, JPA, RESTful APIs, Microservices Architecture, Kafka, OOP, Frappe
- **Databases, Cloud & Observability:** MySQL, MariaDB, MongoDB, Cassandra, Elasticsearch, Redis, Docker, Kubernetes, AWS (EC2, S3, RDS, CloudWatch), Elastic Stack, ETL Pipelines
- **Core Concepts & Tools:** Data Structures & Algorithms, DBMS, Operating Systems, Distributed Systems, System Design, Low-Level Design, Design Patterns, SDLC, Git, Jenkins, Postman, Cursor, Claude

Projects

Document Processing and Data Ingestion (Python, MongoDB, Docker) **February 2025 - April 2025**

- Built a **Dockerized Streamlit application** to extract structured data from PDF and Excel documents, generate Gemini-powered LLM summaries, and persist processed outputs in MongoDB.

Education

National Institute of Technology, Calicut **August 2018 - May 2022**

Bachelor of Technology in Electronics and Communication Engineering *CGPA: 6.79*

Achievements

- Recognized for engineering excellence with **Employee of the Month (BigBasket, Jan 2026)** for cutting costs by **90%**, and received **A* performance ratings** along with the **Beyond the Call of Duty** award at Jio.
